Freelance: Mostaql | Khamsat | Nafezly | Kafiil | Freelancer | Freelance Yard

PROFESSIONAL SUMMARY

Third-year B.Sc. Artificial Intelligence student (Machine Intelligence Department, Menofia University) with a 3.16 GPA (Very Good) and a strong upward trend (latest semester 3.59). Builds agentic AI systems, retrieval-augmented reasoning pipelines, and predictive ML models — including a Microsoft Agents League hackathon agent that enforces corporate security policies via Foundry IQ retrieval and a real-time Slack credential-leak detection agent. Also delivers full-stack Django applications and end-to-end BI solutions (ETL, Star Schema, Power BI). Currently studying data science and machine learning through the University of Tokyo's GCI World program and a fully funded BHN Academy scholarship with DataCamp.

EDUCATION

B.Sc. Artificial Intelligence — Machine Intelligence Department | Menofia University, Faculty of Artificial Intelligence | 2024 – 2028

- Track: Cognitive Security & Threat Intelligence | GPA: 3.16 / 4.0 (Very Good) | Credits earned: 72
- Key grades: 100% (A+) Data Science & Analytics | 95% (A+) Computer Networks | 94% (A) Programming for Data Science | 88% (A−) Database Systems (Oracle SQL) | 87% (A−) Introduction to Machine Learning | 85% (A−) Digital Image Processing
- Current coursework (Fall 2026): Deep Learning, Computer Vision, Robotics, Logic Programming, Automata & Complexity Theory, Cybersecurity Fundamentals

EXPERIENCE

Machine Learning Engineering Intern | FlyRank AI — 07/2026 – 09/2026 (12 weeks) | Remote

- Selected for FlyRank AI's intensive 12-week ML engineering internship (Jul 1 – Sep 23, 2026) focused on production-grade pipeline architecture and model evaluation, under the supervision of CEO Alen Malkoc.
- Worked on model evaluation, feature engineering, and end-to-end ML pipeline design across heterogeneous datasets, building commercial applied-AI experience.

Freelance Data Analyst & Full-Stack Developer | Self-Employed — 05/2026 – Present | Egypt (Remote)

- Built and deployed a full-stack "Honor Board" web application for Al-Wahhab Center for Quran Memorization (via Kafiil, Sep–Oct 2026) with Python, Django, and PostgreSQL: a responsive, branch-filterable student display that follows the client's visual identity, plus a secure admin panel for weekly record updates. Delivered on schedule with a 5.0/5 client rating for quality, communication, and timeliness.
- Deliver BI and data-engineering solutions — ETL pipelines, Power BI dashboards, and dimensional data models — for retail, finance, and operations datasets, using automated Power Query pipelines and Star Schema models with DAX time-intelligence measures (YoY, QoQ, rolling 12-month) to speed up month-end reporting.
- Maintain active profiles on six freelance platforms: Mostaql, Khamsat, Nafezly, Kafiil, Freelancer, and Freelance Yard.

Web Development Trainee | Information Technology Institute (ITI), CREATIVA Menofia — 07/2026 – 08/2026 | Egypt

- Completed ITI's intensive 126-hour "Web Development using Python & Generative AI" program (Jul 9 – Aug 30, 2026): Client-Side Technologies (42 hrs), PostgreSQL Database Fundamentals (18), Object-Oriented Programming with Python (24), Django Web Development (24), Intro to Generative AI & Prompt Engineering (6), Vibe Coding (6), and Freelancing (6).
- Applied the Django and PostgreSQL stack in CARVIX and in a client-delivered Honor Board web application.

Data Analysis Trainee | National Telecommunication Institute (NTI) — 04/2026 – 05/2026 | Egypt

- Completed 90+ contact hours of applied data-analysis training across the full analytical workflow at a nationally accredited telecom training institute.
- Built analytical workflows and reporting dashboards with Microsoft SQL Server and relational database fundamentals, Python (Pandas, Matplotlib), Power BI, DAX, Tableau, and advanced Excel.

TECHNICAL PROJECTS

Cyber-Intel AI Agent — Applied AI for Enterprise Security (Microsoft Agents League Hackathon) | June 2026 | *Azure AI Projects SDK, FastMCP, o4-mini, Foundry IQ, Cloudflare Tunnels, Python*

- Engineered an applied-AI agent on Azure AI Projects SDK that enforces corporate security policies via Foundry IQ retrieval-augmented generation, automating Tier-1 incident response with zero policy-blind hallucinations in demo testing.
- Exposed live threat-intelligence tools through FastMCP over Cloudflare Quick Tunnels (SSE / streamable-HTTP) with a human-in-the-loop approval system, achieving sub-60-second deployment with zero static infrastructure.

AgentZero — Real-Time Slack Credential Leak Detection Agent | June 2026 | *Python 3.11, Slack Bolt, FastMCP, Flask, Google GenAI, JSONL, Docker*

- Built a Slack security agent with hybrid regex + AI semantic detection of 15+ credential patterns (AWS keys, Stripe keys, credit cards, SSH keys, API tokens) across workspace messages.
- Engineered a multi-provider AI router (Gemini, OpenRouter, Groq, GitHub Models) with graceful failover across four LLM providers, slash commands (/audit-scan, /audit-report, /audit-search, /audit-status), and automated PDF compliance reports.

HouseHub+ — AI-Driven Anti-Fraud Public Housing Allocation System | June 2026 | *Python, Streamlit, Scikit-Learn, OpenCV, EasyOCR, Folium, Hashlib*

- Built a Scikit-Learn RandomForestRegressor scoring engine that rates applicant housing need on a 0–100 scale for objective, bias-free eligibility scoring.
- Developed an OpenCV DocumentInspector module that simulates Error Level Analysis (ELA) to detect tampered documents, combined with SHA-256 PII hashing (PrivacyShield), behind a dual-sided Citizen Portal and Admin Dashboard.

CARVIX — Smart Vehicle Maintenance System | *Python, Django, PostgreSQL, Google Gemini API, Docker*

- Built a full-stack, role-based platform (Owner, Technician, Admin) for managing vehicle maintenance, using clean MVT architecture with service and selector layers, seed data, and an automated test suite.
- Integrated a Gemini-powered assistant that books service appointments and answers availability queries strictly within each role's permissions.

Power BI Analytics Portfolio — Mobile Game Monetization & Multi-Year Retail Intelligence | April – May 2026 | *Power BI, DAX, Power Query (M), Star Schema, Advanced Excel (Power Pivot)*

- Engineered an automated ETL pipeline and Star Schema model consolidating 270,000+ multi-national retail records across 19 stores in the USA, Mexico, and Canada, with YoY / QoQ / rolling-12-month time intelligence, cutting month-end reconciliation time by 70%.
- Built player-monetization analytics: Power Query ingestion, behavioral segmentation (Whale / Dolphin / Minnow), ARPU and payer-conversion DAX measures, and cohort retention matrices cross-tabulating country against game genre.

Automated ML Evaluation Pipeline | May 2026 | *Python, Scikit-Learn, Streamlit, Pandas, SMOTE*

- Architected a 5-module system automating dataset ingestion, preprocessing, multi-algorithm classification, and reporting with SMOTE imbalance correction, reducing manual model evaluation from hours to a single pipeline run.

ML Studio — Interactive Machine Learning Web Application | April 2026 | *Streamlit, Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn, imbalanced-learn*

- Built a no-code ML experimentation app covering the full workflow: CSV/Excel upload, EDA with correlation heatmaps, preprocessing (missing values, outlier handling, power transform, scaling, encoding), seven classification algorithms, regression, and K-Means clustering.

Quest for the Code — Interactive RPG Portfolio | *Vanilla JavaScript, HTML5, CSS3, Web Audio API, GitHub API*

- Designed a fully responsive, game-style developer portfolio with no frameworks: 8 explorable zones, an XP and level system, live GitHub repository data via API, a Web Audio API sound engine with no external audio files, and a Formspree contact form.

CORE SKILLS

- **Machine Learning & AI:** Predictive Modeling, Scikit-Learn (RandomForestRegressor, K-Means), Supervised & Unsupervised Learning, SMOTE, Feature Engineering, Outlier Handling, LLM Integration, Agentic AI Development, Multi-step Reasoning, Generative AI, Prompt Engineering, Responsible AI
- **Data Analysis & BI:** Pandas, NumPy, Matplotlib, Seaborn, Power BI, DAX (Time Intelligence, KPI Formulas), Power Query / M, ETL Pipeline Design, Star / Snowflake Schema Modeling, Tableau, Advanced Excel (Power Pivot), Cohort & Segmentation Analysis
- **Databases:** SQL, PostgreSQL, Microsoft SQL Server, Oracle 11g
- **Programming & Web:** Python (primary), JavaScript (ES6+), HTML5, CSS3, Java (JADE Multi-Agent Systems), C++, Bash, Django, Flask, Streamlit, REST APIs
- **Cybersecurity & Infrastructure:** Linux Administration (Mint, Kali), Bash Scripting, SSH, Threat Intelligence, SOC Concepts, Policy Grounding, TCP/IP, Access Control Lists (ACLs), Network Security, Credential Leak Detection
- **Cloud & Deployment:** Azure AI Projects SDK, Foundry IQ, FastMCP, Cloudflare Tunnels (Quick Tunnels + SSE / streamable-HTTP), Docker
- **Computer Vision & NLP:** OpenCV (Error Level Analysis), EasyOCR, Hugging Face, Gemini API, Multi-Provider AI Routing (Gemini / OpenRouter / Groq / GitHub Models)
- **Tools & Environments:** Git / GitHub, Jupyter Notebook, Slack Bolt, Streamlit, Flask, FastMCP

COMPETITIONS & HACKATHONS

- **Microsoft Agents League Hackathon** — June 2026 | Individual submission | Agentic AI for enterprise security
- **USAII Global AI Hackathon** — June 2026 | Team member (4-person) | Public-sector AI & ML fraud detection | Final result: 63/70
- **Global AI Community — Agents League: Reasoning Agents** — July 2026 | Badge recipient | Microsoft Foundry, agentic AI development, multi-step reasoning

CERTIFICATIONS & TRAINING

In progress

- **GCI World 2026 September** — Matsuo & Iwasawa Laboratory, The University of Tokyo (Omnicampus) | Sep 2026 – Present | Online data science and AI program for international students
- **BDIF Fully Funded Scholarship** — BHN Academy (Bechem Humanitarian Network e.V., Germany) with DataCamp, Google, and Coursera | Oct 2026 – Present | Enrolled; DataCamp courses unlocked | 6-month, self-paced professional certification program

Completed

- **Web Development using Python & Generative AI (126 hrs)** — Information Technology Institute (ITI), CREATIVA Menofia | Jul 9 – Aug 30, 2026
- **Amazon Web Services (AWS)** — Machine Learning Learning Plan | ML Essentials for Business & Technical Decision Makers | Planning a Machine Learning Project | ML Terminology and Process | Intro to ML: Art of the Possible (Sep 2025) | AWS Educate Machine Learning Foundations Badge (Jul 2025)
- **DataCamp** — Introduction to Python (Jun 2026) | Intermediate Python (Jul 2026) | Supervised Learning with scikit-learn (Aug 2026) | Unsupervised Learning in Python (Aug 2026)
- **Microsoft AI Skills Fest 2026** (Jun 2026) — AI Ethics, AI Literacy, Applied AI, Prompt Engineering, Responsible AI, Workflow Automation
- **Satr / Tuwaiq Academy** — Introduction to Cybersecurity | Linux 101 | Linux: Files and Permissions | Kali Linux (Apr 2026) | Secure Shell (SSH) 101 | Threats, Attacks & Vulnerabilities in Cybersecurity (Sep 2026) | C++ 101 | Python 101 | Intro to Programming (2024)
